

Prompt Library for Content Generation

Goal: A personal, reusable prompt library of 10 prompts for content generation tasks.

Prompt #1: LinkedIn Post for Product Launch

Techniques used: Role + Audience Targeting + Constraints

Template:

You are a senior B2B content marketer who writes high-engagement LinkedIn posts.

Write a LinkedIn post announcing the launch of {product_name}, a {product_category} built for {target_audience}.

Key benefit to highlight: {key_benefit}

Tone: {tone}

Length: {word_limit} words max

Structure: hook line, 2-3 short paragraphs, one line with a relevant emoji list of features, end with a CTA: {cta_text}

Include 3-5 relevant hashtags at the end.

Output:

Struggling to organize your study schedule? 📅

Meet **StudyBuddy AI**, an AI study planning tool built for college students. It helps you plan your study sessions and manage your time efficiently.

Spend less time worrying about what to study and more time actually learning.

📅 Smart scheduling | ⌚ Time management | 🎯 Goal tracking

Try StudyBuddy AI today!

#StudyBuddyAI #StudentLife #StudyTips #AI #Productivity

Iteration:

V1:

Write a LinkedIn post about {product_name} launching.

Problem with V1: No role, no audience, no tone/length control, no structure — output would be generic and unusable without heavy editing.

V2: (shown above — Role + Audience Targeting + Constraints)

What improved and why: Adding a Role (“senior B2B content marketer”) anchors the writing style and quality bar. Audience Targeting ({target_audience}, {key_benefit}) makes the message relevant instead of generic. Constraints (word limit, structure, CTA) make the output directly postable instead of needing a rewrite.

Prompt #2: Blog Post Introduction

Techniques used: Context + Constraints

Template:

Context: I am writing a blog post titled "{blog_title}" for an audience of {target_audience} who already know {assumed_knowledge_level} about {topic}.

Write only the introduction paragraph (not the full post).

Requirements:

- Length: {word_limit} words
- Open with a hook (question, stat, or bold claim)
- End with a one-line preview of what the post will cover - Tone: {tone}

Output:

What if managing your study schedule could be easier?

College students often balance classes, assignments, projects, and exams at the same time. A well-organized study plan can make this workload easier to manage.

In this blog, we will explore how AI-powered study planning can help students organize their schedules, manage their time, and stay consistent with their learning goals.

Prompt #3: Cold Outreach Email

Techniques used: Role + Few-shot + Constraints

Template:

You are a sales development rep writing concise, non-pushy cold emails.

Here are examples of the style I want:

Example 1:

Subject: Quick question about {example_pain_point_1} Hi {{First Name}}, noticed {example_trigger_1}. We help teams like yours {example_benefit_1} — worth a 15-min chat?

Example 2:

Subject: {example_pain_point_2}?

Hi {{First Name}}, saw {example_trigger_2}. Curious if {example_benefit_2} is still a priority for you this quarter.

Now write a cold outreach email to {recipient_role} at {recipient_company}, referencing {trigger_event} as the reason for reaching out, and offering {value_proposition}.

Constraints: under {word_limit} words, one clear CTA ({cta_text}), no generic flattery, subject line included.

Output:

Subject: A simpler way to organize study schedules

Hi [First Name],

I noticed that managing study schedules can be challenging for college students balancing classes, assignments, and exams.

StudyBuddy AI helps students organize their study schedules and plan their learning more efficiently.

Would you be open to a quick 15-minute conversation to see how it could help your students?

Best,
[Your Name]

Iteration:

V1:

Write a cold email to {recipient_role} at {recipient_company} about {value_proposition}.

Problem with V1: No style reference, so tone varies wildly between generations; no length or CTA constraint, leading to long, salesy-sounding emails.

V2: (shown above — Role + Few-shot + Constraints)

What improved and why: Few-shot examples lock in a consistent, low-pressure tone that matches real cold-email best practice. The Role reinforces that framing. Constraints (word limit, single CTA) keep the email skimmable, which is the actual goal of a cold email.

Prompt #4: Follow-up Email

Techniques used: Context + Constraints

Template:

Context: I previously emailed {recipient_name} about {original_topic} on {original_date}. They have not replied yet. This is a polite follow-up, not a first outreach.

Write a short follow-up email that:

- References the earlier email briefly, without sounding impatient - Adds one new piece of value: {new_value_or_info}
- Ends with a low-friction CTA: {cta_text}
- Length: under {word_limit} words
- Tone: {tone}

Output:

Subject: Following up on StudyBuddy AI

Hi [First Name],

Just following up on my earlier email about StudyBuddy AI.

It helps college students organize their study schedules and plan their learning more efficiently.

Would you be available for a quick conversation this week?

Best,
[Your Name]

Prompt #5: Product Description

Techniques used: Role + Audience Targeting + Constraints

Template:

You are an e-commerce copywriter who writes conversion-focused product descriptions.

Write a product description for {product_name}, a {product_category}, targeted at {target_audience}.

Include:

- One benefit-led opening line (not a feature list)
- 3-4 bullet points covering: {feature_1}, {feature_2}, {feature_3} - Sensory or outcome-based language appropriate for {tone} - Length: {word_limit} words

- End with a short CTA: {cta_text}

Output:

StudyBuddy AI

Make studying more organized and manageable with **StudyBuddy AI**, an AI-powered study planning tool designed for college students.

- 📅 **Smart Scheduling** — Organize your study sessions efficiently.
- ⌚ **Time Management** — Make better use of your available study time.
- 🎯 **Goal Tracking** — Keep track of your learning goals.

Start organizing your study routine with **StudyBuddy AI** today!

Prompt #6: YouTube Title + Description

Techniques used: Few-shot + Constraints

Template:

Here are examples of high-CTR YouTube title/description pairs in this niche:

Example 1 — Title: "{example_title_1}" / Description: "{example_description_1}"

Example 2 — Title: "{example_title_2}" / Description: "{example_description_2}"

Now generate a YouTube title and description for a video about {video_topic}, aimed at {target_audience}.

Requirements:

- Title: under 60 characters, curiosity-driven, no clickbait lies - Description: {word_limit} words, first line must work as a standalone hook (shown before "Show more"), include 3 relevant hashtags at the end

- Mention {key_takeaway} somewhere in the description

Output:

Title Options

1. How AI Can Transform Your Study Schedule
2. Study Smarter With AI: A Beginner's Guide
3. How to Plan Your Studies Using AI

Description

Can AI make studying more organized?

In this video, we explore how AI can help college students plan their study schedules, manage their time, and stay consistent with their learning goals.

Learn how tools like StudyBuddy AI can make study planning simpler and more organized.

#AI #StudyTips #CollegeStudents

Prompt #7: Newsletter Section

Techniques used: Context + Transformation

Template:

Context: This is one section of a {newsletter_name} newsletter sent to {target_audience}.
The overall newsletter tone is {tone}.

Take the following raw notes and transform them into a polished newsletter section with a short heading, 2-3 sentences of body text, and one actionable takeaway:

Raw notes: {raw_notes}

Constraints: {word_limit} words max, no jargon, end with a link placeholder:
{link_placeholder}

Output:

Study Smarter With AI

Managing classes, assignments, and exams can make planning your study time difficult. AI-powered tools can help students organize their schedules and create a more structured study routine.

Actionable takeaway: Set aside a few minutes each week to plan your upcoming study sessions.

Learn more here: {link_placeholder}

Prompt #8: Ad Copy (Google / Meta)

Techniques used: Role + Audience Targeting + Constraints

Template:

You are a performance marketing copywriter specializing in {ad_platform} ads.

Write ad copy for {product_name} targeting {target_audience} who have the pain point: {pain_point}.

Deliverables:

- 3 headline variations (max 30 characters each)
- 2 description variations (max 90 characters each)
- 1 primary text option for the ad body (max {word_limit} words) - Include the CTA: {cta_text}
- Tone: {tone}

Output:

Headlines

1. Plan Your Study Time
2. Study Smarter With AI
3. Organize Your Studies

Descriptions

- Plan your study schedule with AI.
- Stay organized and study efficiently.

Primary Text

Struggling to manage your study schedule?
StudyBuddy AI helps college students organize their study time and stay focused on their learning goals.

Try StudyBuddy AI today!

Prompt #9: Article Summarization

Techniques used: Transformation + Constraints

Template:

Summarize the following article for {target_audience}. Preserve the key facts and any numbers/statistics; do not add information that isn't in the source.

Article:
{article_text}

Output format:

- One-sentence TL;DR
- {num_bullets} bullet points covering the main points - Length: total summary under {word_limit} words
- Tone: {tone}

Output:

TL;DR:

AI can help students organize their study schedules and manage their learning more efficiently.

- AI-powered study tools can help students create structured study plans.
- Organized schedules can make it easier to manage multiple academic responsibilities.
- Time management helps students stay consistent with their learning goals.
- Study planning tools can reduce the effort involved in organizing daily study sessions.

Iteration:

V1:

Summarize this article: {article_text}

Problem with V1: No target length, no audience framing, and no output structure — results range from one line to multiple paragraphs, inconsistent for reuse across articles.

V2: (shown above — Transformation + Constraints)

What improved and why: Specifying the output format (TL;DR + fixed bullet count) makes summaries consistent and scannable across different articles. The instruction not to add outside information reduces hallucination risk, and the audience/tone constraint makes the summary usable in different contexts (e.g., internal digest vs. public post) just by changing placeholders.

Prompt #10: Tone Rewriter (Formal ↔ Casual)

Techniques used: Transformation + Few-shot

Template:

Rewrite text between formal and casual tone while preserving the original meaning and any factual details.

Examples:

Formal: "We regret to inform you that your request cannot be processed at this time."

Casual: "Hey, quick heads up — we can't process this request right now."

Formal: "Please find attached the requested documentation for your review."

Casual: "Attached is the doc you asked for — take a look when you get a chance!"

Now rewrite the following text from {source_tone} to {target_tone}: Text: {input_text}

Constraints: keep the same core message and any names/numbers unchanged; length

should stay within {percent_length_variance}% of the original.

Output:

Rewritten in casual tone:

Hey, just wanted to let you know that we can't process your request right now. Please check the details and try again later.
